# 3-MINUTE VIDEO PITCH SCRIPT: APPROACH, ASSET & WHY

**Candidate:** A. Avinash (Amrita Vishwa Vidyapeetham) | **Exact Word-for-Word Delivery with Timestamps & Screen Directions**

## PART 1: THE HOOK, CONTEXT & THE PROBLEM (0:00 – 0:30 | 30s)

**[VISUAL CUE: Full Screen Webcam — Confident Eye Contact, High Energy]**

"Hi NxtWave team! I'm **A. Avinash** from **Amrita Vishwa Vidyapeetham**. Today, I'm presenting my growth strategy to get **500 final-year engineering students** to register for our free workshop: *'Build Your First AI Project in 60 Minutes'*—in 7 days, with a budget of just ■**2,000**.

When I analyzed this challenge, the biggest trap was running standard Meta or Google Ads. At an average ■35 CAC in edtech, ■2,000 would exhaust itself in 50 leads and fail the goal by 90%.

To hit 500 registrations, I had to understand the final-year student's psychological reality: **they don’t want generic AI theory; they have peak campus placement anxiety, and they have an urgent major project deadline in 4 weeks.**

So instead of spending money on paid ads, I built a zero-waste **Community Distribution Engine and a Product-Led Viral Loop**."

## PART 2: THE MARKETING PLAN & UNIT ECONOMICS (0:30 – 1:15 | 45s)

**[VISUAL CUE: Switch Screen Share to 'Growth Command Center' Tab showing Funnel Math]**

"Here is how the 500+ registrations break down across 4 strictly prioritized channels:

1. **First, Campus Placement Reps (CRs):** I allocated ■1,600 of our ■2,000 budget as a performance incentive pool across 10 engineering colleges (including Amrita Vishwa Vidyapeetham, VIT, and JNTU). The top 4 CRs who drive 50+ registrations get ■400 Amazon vouchers. Because Class Reps have 100% peer trust and admin rights in official batch WhatsApp groups, this channel drives **254 registrations** at ■6.30 CAC.

2. **Second, our Product-Led Viral Referral Loop:** Engineering students work in final-year project teams of 3 to 4. We built a referral engine with a K-factor of 0.42. Inviting 3 classmates unlocks the *2026 AI Capstone Blueprint Vault*. When 1 student registers, they immediately recruit their 3 project teammates to get the blueprints. This yields **148 organic registrations at ■0 marginal cost**.

3. **Third, LinkedIn Placement Teardown Drops:** ■400 spent micro-boosting student problem-solving carousels: *'Why recruiters reject 2018 projects'*, adding **90 registrations**.

4. **Fourth, Technical Clubs (IEEE/CSI):** Delivering **60 registrations** through attendance tracking partnerships.

That gives us **560 confirmed registrations at a blended CAC of just ■3.57**."

## PART 3: THE WORKING ASSET DEMONSTRATION (1:15 – 2:15 | 60s)

**[VISUAL CUE: Screen Share Live Demo of 02_WORKING_ASSET/index.html — Smooth Navigation]**

"Now, let me walk you through the actual working asset I engineered to execute this entire growth flywheel.

**1. The Registration Flow:** Unlike a static Google Form, our landing page triggers immediate relevance. Notice how we speak directly to 2026 hiring expectations and emphasize the 'Build in 60 Minutes' promise with zero prerequisites.

**2. The Instant Viral Referral Engine:** Watch what happens immediately upon form submission. The student instantly receives their unique referral link and a progress bar. By referring 3 project group partners, they immediately unlock the *2026 AI Capstone Blueprint Vault* and Fast-Track Resume Review. This in-product hook is what drives our 0.42 viral coefficient.

**3. The WhatsApp Community Broadcast Simulator:** For our Class Representatives, we've built a one-click copy tool with UTM-tagged WhatsApp templates tailored for college placement groups, ensuring zero friction in distribution.

**4. The Interactive AI Project Evaluator:** Students can enter their current major project idea—like a CRUD attendance tracker—and the system scores its placement competitiveness in real-time, instantly explaining why an AI modernization like an automated RAG auditor boosts interview shortlists by 4x.

**5. Live Growth Analytics:** All data streams into our live command center, tracking registrations, referral attribution, channel conversion rates, and exportable CSV and calendar .ics files."

## PART 4: WHY HIRE ME FOR THE GROWTH INTERN ROLE? (2:15 – 3:00 | 45s)

**[VISUAL CUE: Full Screen Webcam — Direct, Sincere, High Conviction]**

"Why should you bring me on as your Growth Intern at NxtWave?

**First, I don't just ideate—I execute full-stack.** When given a challenge, I didn't just submit a slide deck of theories; I built a complete, working, interactive product, wrote the distribution copy, modeled the unit economics, and stress-tested the funnel.

**Second, I have an intimate, ground-level pulse on college engineering students.** I understand what makes a final-year student scroll past an ad, and what makes them immediately forward an invite to their official college WhatsApp group.

**And third, I think in first-principles unit economics.** I will treat every single rupee of NxtWave's marketing budget with the discipline of an owner—optimizing for low CAC, virality, and high-converting student cohorts.

Thank you for reviewing my submission, and I look forward to driving high-velocity growth with the NxtWave team!"

■ **CANDIDATE RECORDING CHECKLIST:**
1. Candidate Name: **A. Avinash** (Amrita Vishwa Vidyapeetham).
2. Open 02_WORKING_ASSET/index.html in Chrome before recording.
3. Use Loom or OBS Studio with camera picture-in-picture in the bottom-right corner.
4. Keep pace at ~135 words/minute to comfortably land within the 3:00 minute limit.
