GROWTH EXECUTION PLAN: 500 FINAL-YEAR ENGINEERING REGISTRATIONS

Candidate: A. Avinash (Amrita Vishwa Vidyapeetham) | **Workshop:** "Build Your First AI Project in 60 Minutes" | **Budget:** ■2,000 | **Duration:** 7 Days | **Blended CAC:** ■3.57

1. UNDERSTANDING THE FINAL-YEAR ENGINEERING STUDENT

Target Audience Persona: Final-year (7th & 8th semester) B.Tech/B.E. students across Computer Science (CSE), IT, Electronics & Communication (ECE), and circuit branches in **institutions like Amrita Vishwa Vidyapeetham** and Tier-2/3 engineering colleges across India (JNTUH, Anna Univ, AKTU, VTU, CSVTU, RTU). Aged 21–22, highly peer-dependent, and active on WhatsApp/Discord.

Why They Care (The Urgent Need):
• **Placement Crisis:** Campus hiring freezes and mass recruiter compensation stagnation (3–3.5 LPA) have triggered intense placement anxiety. 2026 product recruiters immediately reject candidates with obsolete 2018 projects (CRUD attendance, library portals).
• **The Capstone Pressure:** Every final-year student must submit an active working major project within 30–45 days. They are desperate for modern Generative AI / LLM projects that score high marks with external examiners and impress technical interviewers.
• **Action-Oriented Mindset:** They despise 2-hour theoretical webinars full of PowerPoint slides. They crave hands-on, copy-paste runnable code they can showcase on GitHub and resume bullets before Monday.

Objection Handling Matrix:
• *Objection 1:* "Is this just another generic sales pitch webinar?" → **Counter-Measure:** Transparent zero-sales guarantee. Immediate access to a live GitHub starter template repository on Day 1.
• *Objection 2:* "Will I actually complete a project in 60 minutes?" → **Counter-Measure:** Pre-configured cloud IDE (Google Colab / Hugging Face Spaces) requiring zero local environment debugging.
• *Objection 3:* "I don't have deep machine learning or math skills." → **Counter-Measure:** Framed as API orchestration and prompting logic; accessible to any student who knows basic Python or JavaScript.

2. ZERO-WASTE ACQUISITION CHANNELS & UNIT ECONOMICS (■2,000 BUDGET)

Channel Name	Execution Strategy & Mechanism	Target Reach	Conversion Rate	Registrations	Budget (■)	CAC (■)
Campus Placement Reps (CRs)	Incentivize 10 student ambassadors across campuses like Amrita Vishwa Vidyapeetham, VIT & JNTU with micro-bounties (■400 Amazon voucher for CRs driving 50+ signups). Direct broadcast into official placement WhatsApp groups.	2,200 students	11.5%	**254**	■1,600	**■6.30**
Product-Led Viral Referral Loop	In-product 'Refer 3 Project Partners' unlock engine ($K=0.42$). Unlocks '2026 AI Capstone Blueprint Vault' and fast-track resume review for complete final-year project teams.	254 registrants	58.2% share rate	**148**	■0	**■0.00**
Micro-Targeted LinkedIn Boost	High-intent carousel post: '5 Obsolete Final Year Projects That Fail Resume Screening in 2026 (And 3 AI Alternatives)'. ■400 micro-boost targeting final-year B.Tech students.	4,500 views	2.0%	**90**	■400	**■4.44**
College Tech Clubs & Discord	Partnership with IEEE, CSI, and Google DSC student chapters. Provide co-branded event attendance certificates for club members.	850 members	7.1%	**60**	■0	**■0.00**
TOTALS / BLENDED	**Comprehensive multi-channel zero-waste acquisition funnel**	**7,550+**	**7.4% avg**	**552**	**■2,000**	**■3.62**

3. 7-DAY EXECUTION ROADMAP: FROM SPRINT ZERO TO 500+ REGISTRATIONS

Day & Phase	Milestones, Operational Actions & Deliverables	KPI Target	Registrations
Day 1 (Mon) Asset Build & CR Recruitment	• Launch interactive Registration & Project Evaluator Web App (Working Asset). • Onboard 10 Class Reps across target campuses including Amrita Vishwa Vidyapeetham. • Distribute tracking UTM links & pre-written WhatsApp broadcast templates.	10 CRs Active Working App Live	**35**
Day 2 (Tue) WhatsApp Community Blitz	• First coordinated message drop in 25+ official college WhatsApp groups. • Launch 'Final Year Project Evaluator' interactive tool to drive curiosity & organic shares. • Activate viral referral unlock mechanism for registrants.	65% WhatsApp Open Rate Referral K=0.35	**95** (Cum: 130)
Day 3 (Wed) LinkedIn Placement Teardown	• Publish high-engagement LinkedIn carousel: 'Why 2018 projects get 0 placement shortlists'. • Launch ■400 micro-targeted boost to 4th-year engineering students. • Engage commenters with direct registration invite links.	2,500 Impressions 4.5% CTR	**75** (Cum: 205)
Day 4 (Thu) CR Mid-Sprint Leaderboard	• Publish live Ambassador Leaderboard in the internal CR group. • Announce interim reward: Top 2 CRs receive extra ■200 tech book credit. • Second wave of WhatsApp drops focusing on workshop code deliverables.	6 of 10 CRs cross 25 signups	**110** (Cum: 315)
Day 5 (Fri) Tech Club All-Hands	• IEEE / CSI chapters send formal announcements to student member mailing lists. • Host 15-minute Discord AMA previewing the 60-minute AI Project build. • Viral referral loop surges as students register with their Capstone group partners.	Referral K-factor reaches 0.42	**85** (Cum: 400)
Day 6 (Sat) FOMO & Capacity Crunch	• 'Last 100 Seats Remaining' scarcity trigger deployed across all status updates. • Send WhatsApp reminder with 1-click Google Calendar (.ics) integration. • Project Evaluator tool hits peak organic weekend traffic.	92% Calendar add rate	**95** (Cum: 495)
Day 7 (Sun) Final Surge & Prep	• Final 3-hour countdown blast: 'Workshop starts at 6 PM today'. • Dispatch pre-configured Google Colab starter links to all registrants via WhatsApp/Email. • Deliver reward payouts to winning Class Representatives.	550+ Final Target Met Attendance Setup	**57 (Cum: 552)**

4. WORKING ASSET: INTERACTIVE PRODUCT-LED ACQUISITION HUB

To achieve zero-waste acquisition, we engineered a dedicated **5-in-1 Full-Stack Web Platform** (Flask REST API + SQLite + Vanilla JS/CSS) containing: **(1) Placement-Focused Landing Page:** High-converting hero highlighting the 2026 hiring crisis. **(2) Viral Referral Engine ($K=0.42$):** Unique referral code generation with real-time progress bar unlocking the AI Capstone Blueprint Vault upon 3 friend referrals. **(3) WhatsApp Broadcast Simulator:** 1-click copy-paste messaging with pre-configured UTM codes for Campus Reps. **(4) Interactive AI Project Evaluator:** A gamified tool allowing students to score their current final-year project against 2026 hiring standards. **(5) Executive Growth Analytics Dashboard:** Live registration counter, CAC tracking, and 1-click CSV and calendar (.ics) download exports.

5. SHOW US HOW YOU THOUGHT (CRITICAL QUESTIONS)

Q1: What changed between your first idea and final solution?
Initial Idea: Running targeted Meta/Instagram Lead Ads to engineering students and relying on a static landing page.
Why It Failed & Changed: Unit economics math proved this unviable. At ■35–■50 CAC, ■2,000 yields only 40–55 leads, failing the 500 goal by 90%. We pivoted completely to **performance-incentivized Class Representatives (■1,600 prize pool)** and built an **in-product viral referral loop ($K=0.42$)** that turned every registered student into an active distribution node.

Q2: If you had another 24 hours, what would you improve?
1. **Personalized Social Placement Badge Generator:** An automated dynamic canvas tool where registering generates a custom graphic: *'A. Avinash is building his first Generative AI Project with NxtWave'* formatted for instant 1-tap LinkedIn/Instagram Story sharing.
2. **WhatsApp Webhook Automation:** Integrating n8n + Gupshup WhatsApp Business API to deliver automated live calendar ICS invites within 5 seconds of form submission.

Q3: What did AI suggest that you deliberately rejected and why?
• *AI Suggestion:* Cold emailing college placement officers (TPOs) and college principals with formal partnership proposals.
• *Deliberate Rejection Rationale:* College administrative hierarchies are slow-moving bureaucracies; emails take 3–4 weeks for approval and often land in spam filters. In a 7-day sprint, waiting for administrative permission guarantees failure. Peer-to-peer student WhatsApp distribution moves in seconds with 89% open rates.
